Section 1 : Coding

1. Problem Statement

Milton is a diligent clerk at a school who has been assigned the task of managing class schedules. The school has various sections, and Milton needs to keep track of the class schedules for each section using a stack-based system.

He uses a program that allows him to push, pop, and display class schedules for each section. Milton's program uses a stack data structure, and each class schedule is represented as a character. Help him write a program using a linked list.

Input Format

The input consists of integers corresponding to the operation that needs to be performed:

Choice 1: Push the character onto the stack. If the choice is 1, the following input is a space-separated character, representing the class schedule to be pushed onto the stack.

Choice 2: Pop class schedule from the stack

Choice 3: Display the class schedules in the stack.

Choice 4: Exit the program.

Output Format

The output displays messages according to the choice and the status of the stack:

- If the choice is 1, push the given class schedule to the stack and display the following: "Adding Section: [class schedule]"
- If the choice is 2, pop the class schedule from the stack and display the following: "Removing Section: [class schedule]"
- If the choice is 2, and if the stack is empty without any class schedules, print "Stack is empty. Cannot pop."
- If the choice is 3, print the class schedules in the stack in the following: "Enrolled Sections: " followed by the class schedules separated by space.
- If the choice is 3, and there are no class schedules in the stack, print "Stack is empty"
- If the choice is 4, exit the program and display the following: "Exiting the program"
- If any other choice is entered, print "Invalid choice"

Refer to the sample output for the exact format.

Sample Test Case

Input: 1 d
1 h
3
2

3
4
Output: Adding Section: d
Adding Section: h
Enrolled Sections: h d
Removing Section: h
Enrolled Sections: d
Exiting program

Answer

```
#include <stdio.h>
#include <stdlib.h>

struct Node {
    char data;
    struct Node* next;
};

struct Node* top = NULL;

// You are using GCC
void push(char value)
{
    struct Node*nnode=(struct Node*)malloc(sizeof(struct Node));
    nnode->data=value;
    nnode->next=top;
    top=nnode;
    printf("Adding Section: %c\n",value);
}

void pop()
{
    if(top==NULL){
        printf("Stack is empty.Cannot pop.\n");
    }
    else{
        printf("Removing Section: %c\n",top->data);
        struct Node*temp=top;
        top=top->next;
        free(temp);
    }
```

```
}
void displayStack()
{
   if(top==NULL){
      printf("Stack is empty\n");
   }
   else{
      printf("Enrolled Sections: ");
      struct Node*temp=top;
      while(temp!=NULL){
         printf("%c ",temp->data);
         temp=temp->next;
      }
      printf("\n");
   }
}
int main() {
   int choice;
   char value;
   do {
      scanf("%d", &choice);
      switch (choice) {
         case 1:
            scanf(" %c", &value);
            push(value);
            break;
         case 2:
            pop();
            break;
         case 3:
            displayStack();
            break;
         case 4:
            printf("Exiting program\n");
            break;
         default:
            printf("Invalid choice\n");
      }
   } while (choice != 4);

   return 0;
```

```
}
```
